- Make an ordered list of your favourite things
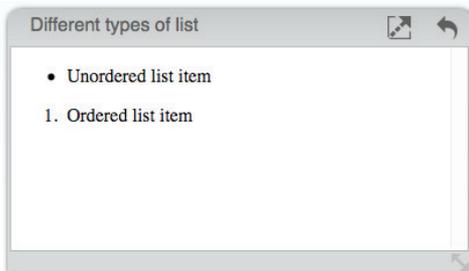

10 mins

1. Get started

What do you want to make a list of? It could be your favourite types of cake; ice cream; animals; bands; TV programmes; or something else.

Click the rubbish bin to clear your page.

2. Different types of lists

Different types of list

- Unordered list item
1. Ordered list item

HTML has several types of list, and we've included two of them in Weggo: the unordered list and the ordered list.

An unordered list (`<ul>`) puts a dot before each item.

An ordered list (`<ol>`) puts a number before each item.

We're going to use an ordered list to make a "top ten".
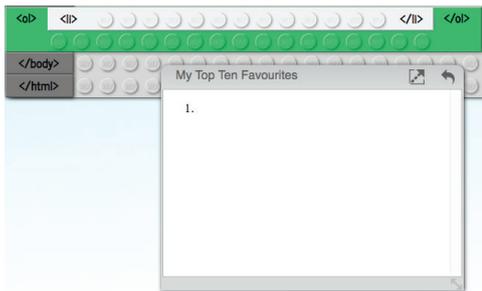

3. Starting the list

Click on the "Lists" section in the Block Box. You'll see green blocks for `<ul>` and `<ol>`.

Drag the `<ol>` tag block into the Code Area.

4. List items

You've made a list, but it's empty. Every list, whether it's a shopping list or a web page list, needs list items.

Below the unordered list and ordered list tags in the Block Box is a list item `<li>` block. Drag it on top of the `<ol>` block in the Code Area.

Notice that you now have a "1" in the output window.

5. Adding content

Just like the `<h1>` and `<p>` tags in the previous tutorial, we need to provide content. So drag a content block onto your `<li>` block.

You can click it to edit it.

Well done, you've just made the first item in your list.

6. More list items

A list needs more than one item (otherwise it wouldn't be a list!) Drag another `<li>` block and content block onto your ordered list.

You can only add content to the last item on the list, but content can be edited ay any time.

7. Add a headline

Great job on making your list!

Give it a headline so that everyone knows what it is. Drag an <h1> block above it and add a content block.

Don't forget to name your page too.

Well done!
